

How To See All Current Cost Monitor Channels With One Click & No Login

This little trick will show you how to see all of your Current Cost monitor's channels online with one click. An added bonus is you do not have to login to anything.

First of all you will need your Current Cost feed id. This will be something similar to:

<http://my.currentcost.com/device/758693128>

Next you need to add the number component of the Current Cost address to this Xively address, resulting with this example:

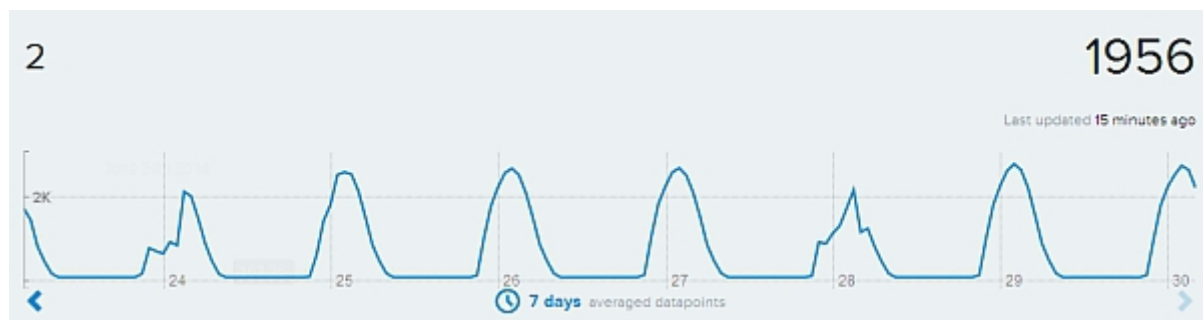

<https://xively.com/feeds/758693128>

Now you can easily see all 10 data channels plus the temperature, easily from one screen. The Xively site is the main driver for the Current Cost portal. Note you will not be able to gain more information from this feed by having an account on Xively. This was the case when it was Pachube / Cosm, but not now. The feed is owned by Current Cost.

The data / graphs can be manipulated to show data over periods of 5 & 30 Mins, 1,6 & 24 Hours and 7 Days to 1 & 3 Months.

6 Hours Of Electricity Consumption

7 Days Of Solar Generation

A nice solution to keeping an eye on all of your channels with no login. Let us know what you think?
