Monitoring Your Home Electricity To Reduce Power Costs

Congratulations for making the decision to monitor your total power consumption and appliances.

Did you know identifying electrical waste and becoming aware of where electricity is used, is almost impossible for any Aussie householder, without a monitoring system! Yet only a very small amount of homes have any form of energy monitoring installed.

Meaning there are many homes where electricity costs could be a lot less!

Installing energy monitoring allows you to be one of the lucky householders, whom will easily know:

- *How to reduce overall power costs, by increasing efficiency of energy use and appliances*
- *What you real-time electricity usage and costs are*
- *The power [kWhs] used over the last day, week, month, billing period and year*
- *Your home electricity usage trends*
- *If the electricity tariff type is the one best suited for your home*

This is a great solution when compared to the average Aussie home. Where householders are only aware of costs when the electricity bill arrives. Every 3 months and that's if they check the bill!

Now you are easily going to see data, that up to now has been missing. Real-time costs for :

Total Consumption : Powerbox Circuits : 10A Socket Appliances

We believe there are **3 EASY STEPS** to reducing your home power costs :

1. *Identifying and eliminating wasted electricity, commonly called standby power*
2. *Minimising unwanted appliance usage and increasing the efficiency of the same*
3. *Secure the best electricity deal you can*

By adding more hardware to your **Realtime Power Monitoring System** you could also be :

1. *Monitoring your 10A socket based appliances such as entertainment, freezer, tenant etc*
2. *Monitoring more power box based circuits such as air conditioner, pool, workshop etc*

With your **Aussie Home Energy Monitoring System** collecting data you will soon know :

1. *What energy your appliances are using and the costs*
2. *When appliances are left on by error*
3. *The 24/7 standby power of your appliances*

IMPORTANTLY by installing a tablet for **Home Power Monitoring System** in an easy to see location, you will allow everyone in the home to act on the real-time data. When everyone becomes aware of electricity usage and costs quickly, you see savings quicker!

Welcome to our world of Solar Power & Electricity Consumption Monitoring.

Thank you for choosing **Aussie Home Energy.**
