

Home Electricity Monitoring Features And Benefits

Ask Yourself What Could You Be Saving Off Your Power Costs?

Well we would say far more than you are currently. Why? Well you only have two sources of information:

- *An electricity bill every three months*
- *An electricity meter in the power box*

MISSING is the needed realtime feedback, for instant notification of any event!

Now there is not much you can do, about a huge electricity bill arriving three months after the event. You may have a great memory but what was that event? That event that cost you so dearly! You can only guess as it could have been :

- *An increase in usage due to householder activity?*
- *An unknown faulty appliance?*
- *An electricity billing issue?*
- *Misconceptions of actual appliance power ratings?*
- *A degrading of solar power output?*
- *A solar power outage?*
- *An electricity metering issue?*

There are many reasons for unknown costly high power events. Of course all hard to discover after the event! With the required realtime feedback for your electricity use :

You Can ACT! You Have OPTIONS! You SAVE!

24/7 Aussie Home Energy Monitoring Solutions

Over the last few years we have become a major player in Home Energy Monitoring. Introducing Home Electricity Monitoring Solutions into many Aussie homes.

Whilst there are many home energy monitors out there on the market, it can be confusing for the '*energy monitoring newbie*' to know exactly what matters.

So to make it easy for you when choosing your [HOME ELECTRICITY MONITORING](#) solution, here are a few features and benefits that our clients are often focus on.

Energy Monitoring Features And Benefits

Multi-Circuit / Appliance : Referred to as multi-channel. Monitoring more than one channel is important, as it helps to pin point high usage appliances. Seeing only total

Home Electricity Monitoring Features And Benefits

household power, does not always supply enough information.

Up to 5 circuits / appliances per online HUB / Energy Monitoring Dashboard, can be monitored. Very rarely would a client monitor more than five. If so then another online HUB / Energy Monitoring Dashboard is easily added.

Unlimited Energy Monitoring Screens : Get the data you need, in more than one location in your home, in the office, in the kitchen or in your face when away from home. Yes you can get the data in any PC browser, be it Windows or MAC. Data can be shown on any tablet using browsers or mobile apps.

Importantly keeping you connected 24/7 with the data anywhere and on any device. Allowing you to act if needed.

Electricity Consumption & Solar Power : If you have solar power installed, then it is important to see what you are generating on the roof and using underneath it. Especially important when in a NET FIT environment. Meaning you have an instant alert to any solar inverter issue and can see when you are importing power or exporting your solar power. Visit our [SYSTEM ALERTS](#) page on our website, to see a list of email alerts.

Display And Analyse Energy Use And Costs : Having the instant notification of '*easy to read*' display in the home, is a major creator of action, to any event. Having the option to further analyse the data, using either free PC software or free online Energy Monitoring Dashboards with mobile apps, further reduces electricity costs in your home.

Your home energy monitoring data easily seen via:

- [PC Browser](#)
- [Tablet](#)
- [Mobile & Apps](#)

Power Box & 10A Socket Transmitters : All types of circuits are easily monitored in the home, via current clamp in the power box or 10A socket plug-in transmitters.

Monitor 2 DIY Electricity AUDIT Tool : Simply use an LCD Energy Monitor, your tablet or mobile with app, to perform your own walk around your home [DIY ELECTRICITY AUDIT](#). Yes we supply DIY Power Audit spreadsheets and forms.

Single Dual Three Phase Support : The current clamp transmitters support all electricity supply options, up to a 100A per phase.

Strong Transmitter Signal : Super strong signal to punch through bricks n mortar. The strength of the signal is important to reduce data drop outs.

Optional Transmitter Signal Upgrade : Easily changed to 150m+ for distant solar arrays.

Home Electricity Monitoring Features And Benefits

Monitoring Systems Configured : Making it easy for you! We prefer to test and configure each energy monitoring system prior to dispatch. This has reduced any client frustration and incorrect work by any electrician, to zero! An online system fully configured with client login, allows you to test for correct installation whilst the electrician is on site. Of course you have the option to configure the system yourself, if you are tech savvy.

FREE Manufacturer's Online Energy Monitoring Dashboard : Supporting up to five channels of mixed data such as :

- *Total Power*
- *Solar Power*
- *Power Box Circuits*
- *10A Socket Appliances*
- *Temperature, Light & Motion [Via Multi-Sensor]*
