

Aussie Home Energy – Electricity Reduction Solutions

Example Time Of Use [TOU] Electricity Tariff Switching Times & Cost Per kWh Common In Ausgrid's & Endeavour's Distribution Areas

This TOU timing is common in NSW Ausgrid's and Endeavour's distribution areas. See [Essential Energy's TOU Table](#). Prices based on regulated retail pre-GST prices as of July 2013.

TIP #1 - Consider using appliances outside of peak and shoulder times to reduce costs. Maximise your electricity usage where possible in the green zone.

TIP #2 - Some appliances can be programmed for set times. Adding a timer, when no-one is at home can also help to operate appliances at set times. This latter option works best with older appliances, where they will turn on and commence operation when power is applied. Newer appliances usually favour being programmed.
